SS COOGEE (1887-1928)

A steamship used to transport cargo and passengers between Melbourne and Launceston and Melbourne and Geelong. From 1917 it was used as a mine sweeper and to repair damage to the Bass Strait cable.

Diving on the Wreck of the SS Coogee

The SS Coogee lies in 33 metres of water, approximately four kilometres offshore between Point Lonsdale and Barwon Heads.

The vessel lies with its bow toward shore (facing north) on a flat limestone/sand seabed. The bow rests on the sand at 33 metres and the stern is at 35 metres depth. The bow and stern are the most complete structures of the wreck as most of the midships section is flattened or missing - most likely due to the use of explosives to scuttle the vessel.

At the bow, divers can see some of the original ship railings. At the stern, the rudder and rudder quadrant (used to steer the rudder) are still in position. In this area, divers will also be able to see the remains of the two decks.

The SS Coogee's engines were removed prior to the steamship being scuttled, however the engine bed and intact boilers can be seen amidships. Hatch covers can be seen in the middle of the ship on the centre line.

The overall length of the wreck is approximately 220 feet (67m).

Dive Standard: Experienced

Dive Conditions

Diving on the SS Coogee is best done on a calm day as rough surface conditions can make boating or diver recovery difficult. Divers should avoid diving on this wreck when the Barwon river is in flood as visibility can be very poor.

Locating the Wreck of the SS Coogee

Launch Site: Queenscliff, Portsea or Sorrento.
Area: Two miles west of Port Phillip Heads in the Ships' Graveyard.
Chart No: AUS 143
Latitude: 38°18'12" S
Longitude: 144°35'0" E

Visual Transits

1. Looking towards Barwon Heads train shaped bushes (stem marks).

2. Looking north, pine trees and hill look like cat's ears.

3. Looking north east to Point Nepean/Arthur's Seat.

Similar Wrecks in Victoria

Other wrecks of early steamships included in the Underwater Shipwreck Discovery Trail are the SS Blackbird (Port Albert), SS Casino (Apollo Bay) and the SS Wauchope (Port Phillip Bay).

Help Protect Our Maritime Heritage

Many wrecks are fragile and require constant monitoring. Divers visiting wreck sites can help the Maritime Archaeology Unit protect and manage Victoria's Historic Shipwrecks by:
- Reporting any damage to wreck sites caused by natural erosion or the activities of divers.
- Reporting artefacts which have become exposed through erosion and are at risk from being washed away or looting.
- Reporting any diver seen actively looting a wreck.
- Informing the Unit of a new wreck site. Divers who find and report a new wreck may be entitled to a reward.
